

# Screen Printing Ink Colors

## Please Note

Due to varying monitor settings, the colors represented on the screen **MAY NOT MATCH** the actual ink colors on the garments exactly. These charts should be used as a reference only.

We also offer *PMS* color matching for an additional charge.

We also offer several metallic inks and fluorescent inks as well as a wide variety of specialty techniques such as foil and high density.

## Screen Printing Contrast

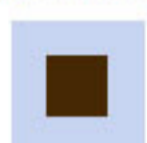

Ink colors may appear differently depending upon what color apparel they are printed on. Higher contrast means that the finished product will be more eye catching from a distance, making sure you stand out from the crowd, while lower contrast will produce more subtle and muted looking designs.

Here is an example of contrast:

High Contrast

High Contrast

Low Contrast

Low Contrast
